

SERVICE AND MAINTENANCE INSTRUCTIONS

Details of parts and construction for your BARKO HYDRAULIC LOADER are shown on the individual parts list. The exploded views are arranged in proper order for assembly and dis-assembly so that, in general, parts may be removed in the order shown.

Two lifting lugs are provided on the boom, one closest to boom pivot for raising entire loader assembly and one farthest out for boom and job assembly.

Instruction for servicing pump, motor, valves and filter are covered on separate pages.

It is of utmost importance that the entire hydraulic system be kept clean and free from dirt, grit, water, air or acids at all times. Periodic draining, cleaning and refilling with new oil is recommended to insure proper performance and service. All openings in the hydraulic circuit must be properly capped, if component units are removed. These units should also be capped or plugged to protect them from entry of foreign matter.

Service and clean the hydraulic system oil filters at each oil change. Quite often a new oil will have a lint like material, which when present in the oil will plug oil filters. For this reason, the filters should be checked during the first 25 hours of operation after any considerable amount of oil has been added to the hydraulic system.

Always drain hydraulic fluid system after working machine because the oil will be warm and will flow freely, which is needed to carry all the dirt and sludge with it.

SECTION I - STRUCTURAL/MECHANICAL COMPONENTS

 A - OPTIONS (IF APPLICABLE)

SECTION II - HYDRAULIC COMPONENTS

 A - OPTIONS (IF APPLICABLE)

SECTION III - SERVICE INFORMATION

LUBRICATION

CLUTCH - Apply small amount of lubricant to clutch throwout collar once a day.

POWER TAKE-OFFS - Apply small amount of lubricant to shaft bearings every 50 hours. Gun fittings below.

REDUCTIONS - Use universal gear lubricant, SAE 90 EP. Remove breather cap and fill to check plug on side. Change oil after first 5 hours and after each 6 months of operation.

CLUTCH ADJUSTMENT (OVERCENTER TYPE ONLY)

IMPORTANT - If clutch does not pull, heats, or operating lever jumps out, adjustment is required. To adjust clutch, remove hand hole plate, turn clutch until adjusting lock pin can be reached. Pull adjusting pin out and turn adjusting yoke to right or clockwise until operating lever requires a distinct pressure to engage. A new clutch requires several adjustments until friction discs are worn in.

OIL RECOMMENDATIONS FOR MOBILE HYDRAULIC SYSTEMS

The oil in a hydraulic system serves as the power transmission medium. It is also the system's lubricant and coolant. Selection of the proper oil is a requirement for satisfactory system performance and life.

Recommendations presented in this data sheet will assist in the selection of suitable oils for use with Sperry Vickers' products. Sperry Vickers does not publish a recommended oil list by brand name or supplier due to the extremely wide variety of oil types on the market.

In most cases, use of these recommendations will lead to selection of a suitable oil. However, due to the complex nature of oil formulation, the variety of oils available and peculiarities of individual hydraulic applications, there will be rare instances where an oil selected on the basis of these recommendations will yield unsatisfactory results. Sperry Vickers cannot be responsible for such exceptions. In this respect, the customer is encouraged to consult his Sperry Vickers representative when selecting an oil.

IMPORTANT FACTORS IN SELECTING AN OIL

- ADDITIVES** — Research has developed a number of additive agents which materially improve various characteristics of oil for hydraulic systems. These additives are selected to reduce wear, increase chemical stability, inhibit corrosion and depress the pour point.

Pump performance and reliability are directly affected by the anti-wear additive formulation contained in the oil. Oils providing a high level of anti-wear protection are recommended for optimum performance and long life.

- VISCOSITY** — Viscosity is the measure of fluidity. The oil selected must have proper viscosity to maintain an adequate lubricating film at system operating temperature.

In addition to dynamic lubricating properties, oil must have sufficient body to provide an adequate sealing effect between working parts of pumps, valves, cylinders and motors, but not enough to cause pump cavitation or sluggish valve action. Optimum operating viscosity of the oil should be between 16 cSt (80 SUS) and 40 cSt (180 SUS).

"Viscosity index" reflects the way viscosity changes with temperature. The smaller the viscosity change, the higher the viscosity index. The viscosity index of hydraulic system oil should not be less than 90. Multiple viscosity oils, such as SAE 10W-30, incorporate additives to improve viscosity index (polymer thickened). Oils of this type generally exhibit both a temporary and permanent decrease in viscosity due to oil shear encountered in the operating hydraulic system. The actual viscosity can, therefore, be far less in the operating hydraulic system than what is shown in normal oil data. Accordingly, when such oils are selected, it is necessary to use those with high shear stability to insure that viscosity remains within recommended limits while in service.

- CHEMICAL STABILITY** — Oxidative and thermal stability are essential characteristics of oils for Mobile hydraulic systems. The combination of base stocks and additives should be stable during the expected lifetime of the oil when exposed to the environment of these systems.

SUITABLE TYPES OF OIL

- CRANKCASE OIL** having letter designation SC, SD or SE per SAE Technical Report J183a. Note that one oil may meet one or more of these designations.
- ANTI-WEAR HYDRAULIC OIL** — There is no common designation for oils of this type. However, they are

produced by all major oil suppliers and provide the anti-wear qualities of the above designated crankcase oils.

- CERTAIN OTHER TYPES OF PETROLEUM OIL** are suitable if they meet the following provisions:

- Contain the type and content of anti-wear additives found in the above designated crankcase oils, or have passed pump tests similar to those used in developing anti-wear type hydraulic oils.
- Meet the viscosity recommendations shown in the following table.
- Have sufficient chemical stability for Mobile hydraulic system service.

OIL VISCOSITY RECOMMENDATIONS

HYDRAULIC SYSTEM OPERATING TEMPERATURE RANGE*	SAE VISCOSITY DESIGNATION
-10°F. to 130°F. (-23°C. to 54°C.)	5W
	5W-20
	5W-30
0°F. to 180°F. (-18°C. to 83°C.)	10W
0°F. to 210°F. (-18°C. to 99°C.)	10W-30
50°F. to 210°F. (10°C. to 99°C.)	20-20W

*Temperatures shown are cold (ambient) start-up to maximum operating. During cold start-up, avoid high-speed operation of hydraulic components until the system is warmed up to provide adequate lubrication.

ARTIC CONDITIONS represent a specialized field where extensive use is made of heating equipment before starting. If necessary, this and judicious use of the following recommendations should be used:

- SAE 5W or 5W-20 oil.
- Oils specially developed for use in arctic conditions; such as synthetic hydrocarbons, esters, or mixtures of the two.

Operating temperature should be closely monitored to avoid exceeding a temperature of 130°F. (54°C.) with any lightweight oil.

SPECIAL REQUIREMENTS

When special considerations indicate a need to depart from recommended oils or operating conditions, consult your Sperry Vickers representative.

CLEANLINESS

Thorough precautions should always be observed to insure the hydraulic system is clean:

- Clean (flush) entire system to remove paint, metal chips, welding shot, etc.
- Filter each change of oil to prevent introduction of contaminant into the system.
- Provide continuous oil filtration to remove sludge and products of wear and corrosion generated during the life of the system.
- Provide continuous protection of the system from entry of airborne contamination by sealing the system and/or by proper filtration of the air.
- During usage, proper oil filling and servicing of filters, breathers, reservoirs, etc., cannot be overemphasized.
- Thorough precautions should be taken, by proper system and reservoir design, to insure that aeration of the oil will be kept to a minimum.

SUBJECT: TURNTABLE BEARING SERVICE REQUIREMENTS

As noted in the Bearing Storage, Installation and Lubrication sheet included in each Parts Book, periodic servicing must be done to the turntable bearings to insure long bearing life. The turntable bearings must be greased approximately every 50 to 100 operating hours. It is necessary to distribute the grease around the race by injecting grease through any one fitting as the machine is rotated. Rotate at least two complete revolutions. Models equipped with two rows of fittings must be greased in both the upper and lower rows, following the above procedure.

Under extremely dusty or dirty conditions the bearings should be greased every 20 hours with sufficient grease to flush out all contaminated grease. See the Parts Book for recommended grease.

After the first 50 hours of operation, the bearing bolts must be retorqued and should be checked periodically after that to insure they remain tight.

NOTE: These specifications are applicable only to factory installed grade nine bolts with lubrication.
Effective as of July 1, 1978

<u>MODEL</u>	<u>TURNTABLE BOLT SIZE</u>	<u>TORQUE</u>
130	5/8"	175 FT. LBS.
160	5/8"	175 FT. LBS.
250	3/4"	310 FT. LBS.
350	7/8"	500 FT. LBS.
450	7/8"	500 FT. LBS.
550	1-1/4"	1500 FT. LBS.

IMPORTANT: FAILURE TO KEEP THE BOLTS TIGHT CAN LEAD TO FATIGUE FAILURE OF BOLTS AND CONSEQUENTLY MACHINE DAMAGE.

INTRODUCTION

Thank you for your purchase of the Barko Hydraulic loader, the loader that is constructed of the best quality materials and workmanship. Utilizing proper care and maintenance, the Barko Hydraulic loader will give you many years of service.

This new owner's manual contains a complete parts breakdown of the entire machine and is divided into sections for your convenience in locating any specific part you may be looking for.

It has been carefully organized to provide you, our customer or distributor, with a thorough knowledge of those various components of the machine, giving you the first-hand information needed to better know your machine.

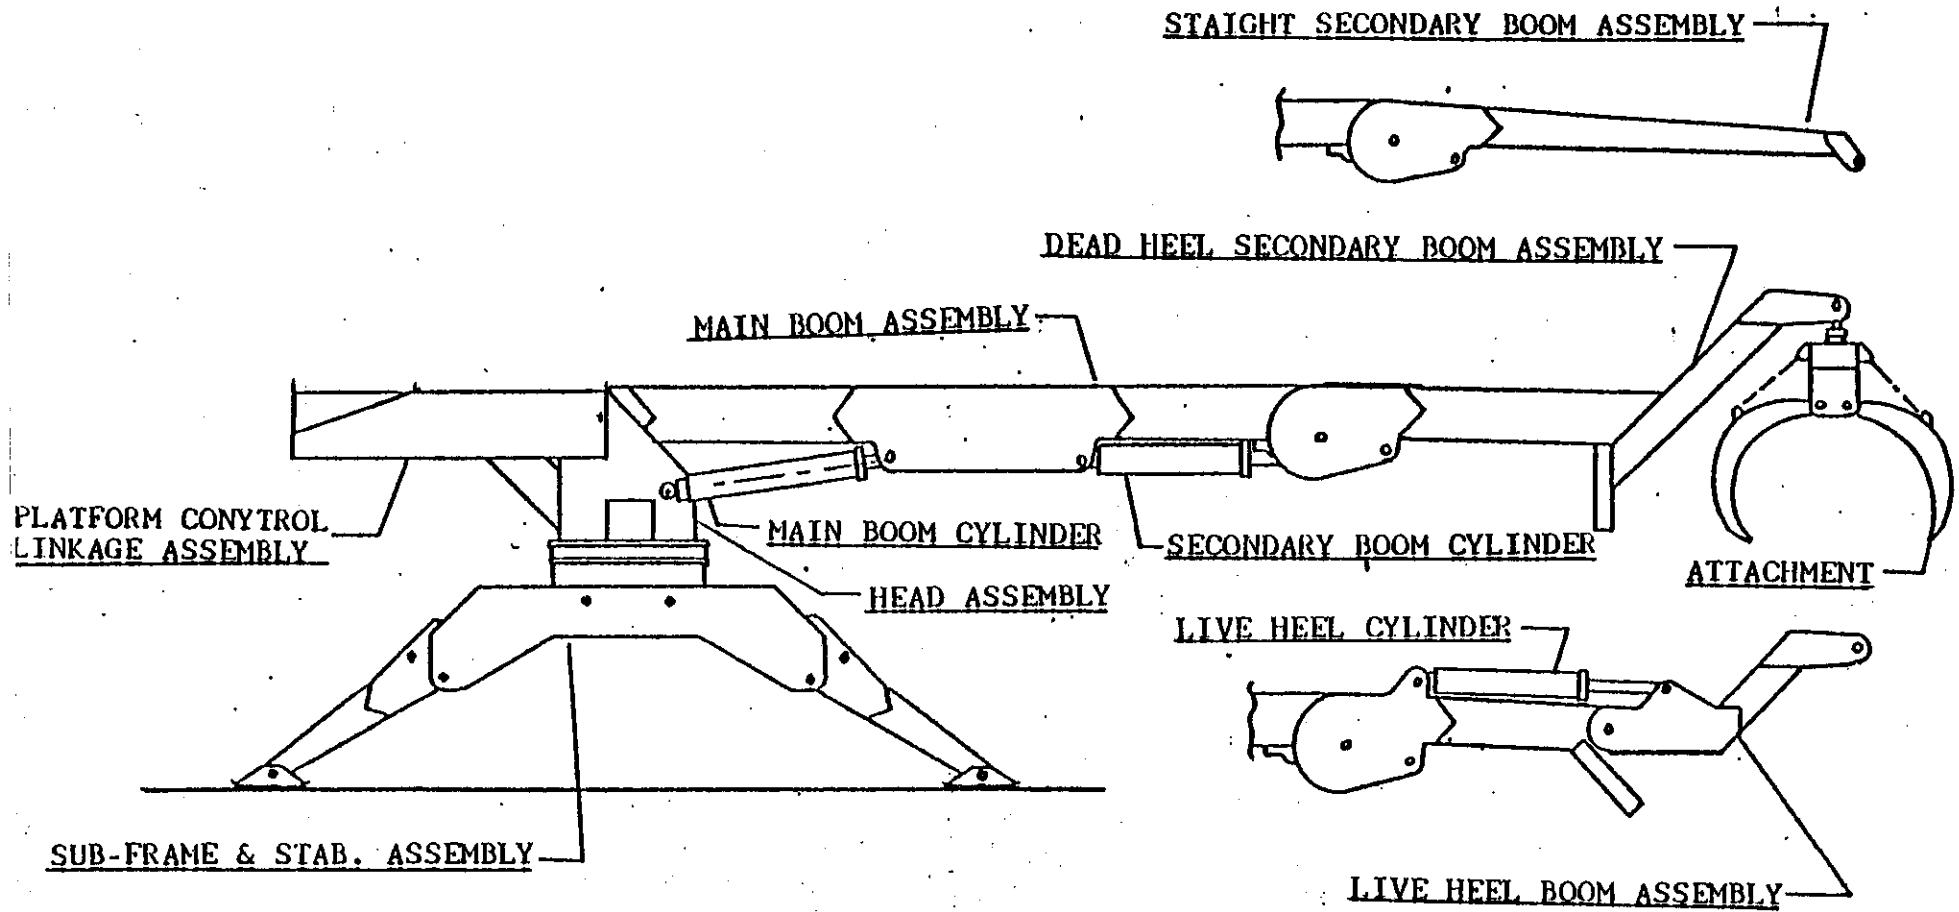

ORDERING INSTRUCTIONS - PARTS

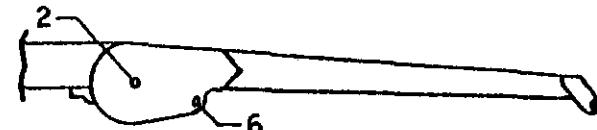

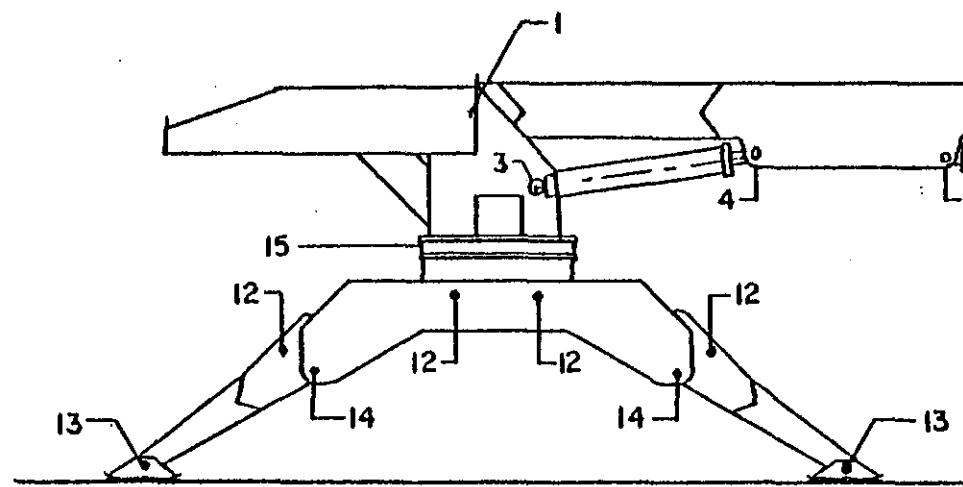

All parts for your BARKO HYDRAULIC LOADER may be ordered from your nearest authorized distributor or from the factory, if your area is served directly by the factory. This includes all hydraulic parts for valves, cylinders, pumps, motors, hose and fittings, in addition to the mechanical and structural parts of the loader.

When ordering parts, please specify the following information:

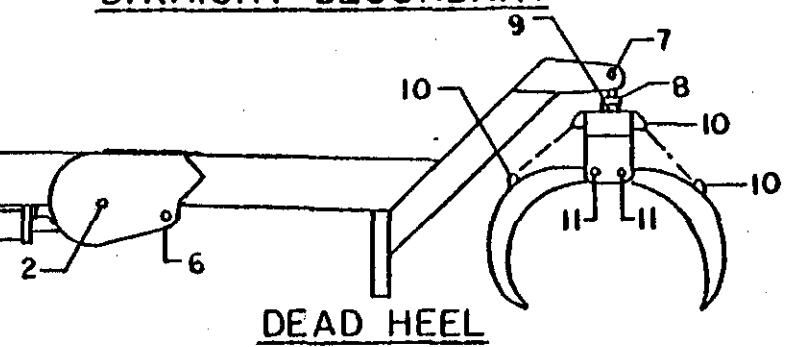

1. PART NUMBER - Specify Barko part number as given in your Owner's manual., Do not take numbers from castings, etc.
2. QUANTITY - of each part ordered.
3. NAME OF PART - Use proper description or title given in the Owner's Manual.
4. RIGHT OR LEFT HAND - if applicable, right or left hand is your right or left when operating the loader from the normal operators seat position behind the boom.
5. MODEL & SERIAL NUMBERS - IMPORTANT!!! Model & Serial numbers are found on the title page of the Owner's Manual and on the identification plate attached to the loader frame.
6. SHIPPING INSTRUCTIONS - Specify definite shipping instructions such as Bus, Air Frt., Air Express, Parcel Post or Truck. When no instructions are given, parts will be shipped Best Way i. e., shipping method will be determined by shipping cost, nature of the part and urgency of the repair.
7. RETURN ADDRESS - When ordering parts, always include a return address where part should be sent.
8. RETURN PARTS - New parts returned by distributor or customer to the factory will have a 15% handling charge subtracted from the amount of the part unless parts were sent by mistake from the factory.
9. SHORTAGE - On all parts shipments & packing kits, if any parts are missing (other than parts marked Backordered) call the factory immediately.
10. WARRANTY - Warranty parts must be returned by prepaid freight or by Barko truck.

WARRANTY

Barko Hydraulic Loader

Barko Hydraulics Warranty to Dealers and/or original purchasers of hydraulic loaders and parts thereof manufactured by Barko Hydraulics is:

- A. Hydraulic loaders and parts manufactured by Barko Hydraulics will conform to the designation or description under which they are sold.
- B. Hydraulic loaders and parts manufactured by Barko Hydraulics shall be delivered free from all security interests, liens and other encumbrances, good title shall be conveyed, and transfer rightful.
- C. Hydraulic loaders manufactured by Barko Hydraulics will be free from defects in materials and workmanship for a period of three (3) months or five hundred (500) hours of operation from first day in service, whichever occurs first, provided first day of service is not later than sixty (60) days from delivery to dealer and/or original purchaser,
 - a. unless Barko Hydraulics extends the period in which such first day of service is to occur, and Barko Hydraulics or dealer certifies such extended period for warranty to commence.
- D. Replacement parts manufactured by Barko Hydraulics will be free from defects in material and workmanship for a period of three (3) months or five hundred (500) hours of operation from first day in service, whichever occurs first, provided first day of service is not later than one hundred twenty (120) days from delivery to Dealer and/or original purchaser, and installation of repair parts is made by authorized Dealer.
- E. Barko Hydraulics liability under this Warranty or otherwise shall be limited to providing a replacement part for any non-conforming part, not including freight, special charges or cost of installation, or in the alternative, at Barko Hydraulics' sole option, the cost of repairs (excluding travel) during normal working hours to that non-conforming part.

Proof of any defect in any hydraulic loader or replacement part must be submitted to designated Dealer or Barko Hydraulics' factory within ten (10) days from the date on which the defect was originally discovered.

Barko Hydraulics makes no warranty with respect to parts supplied to it by other manufacturers; these components shall be subject to the warranties of their respective manufacturers.

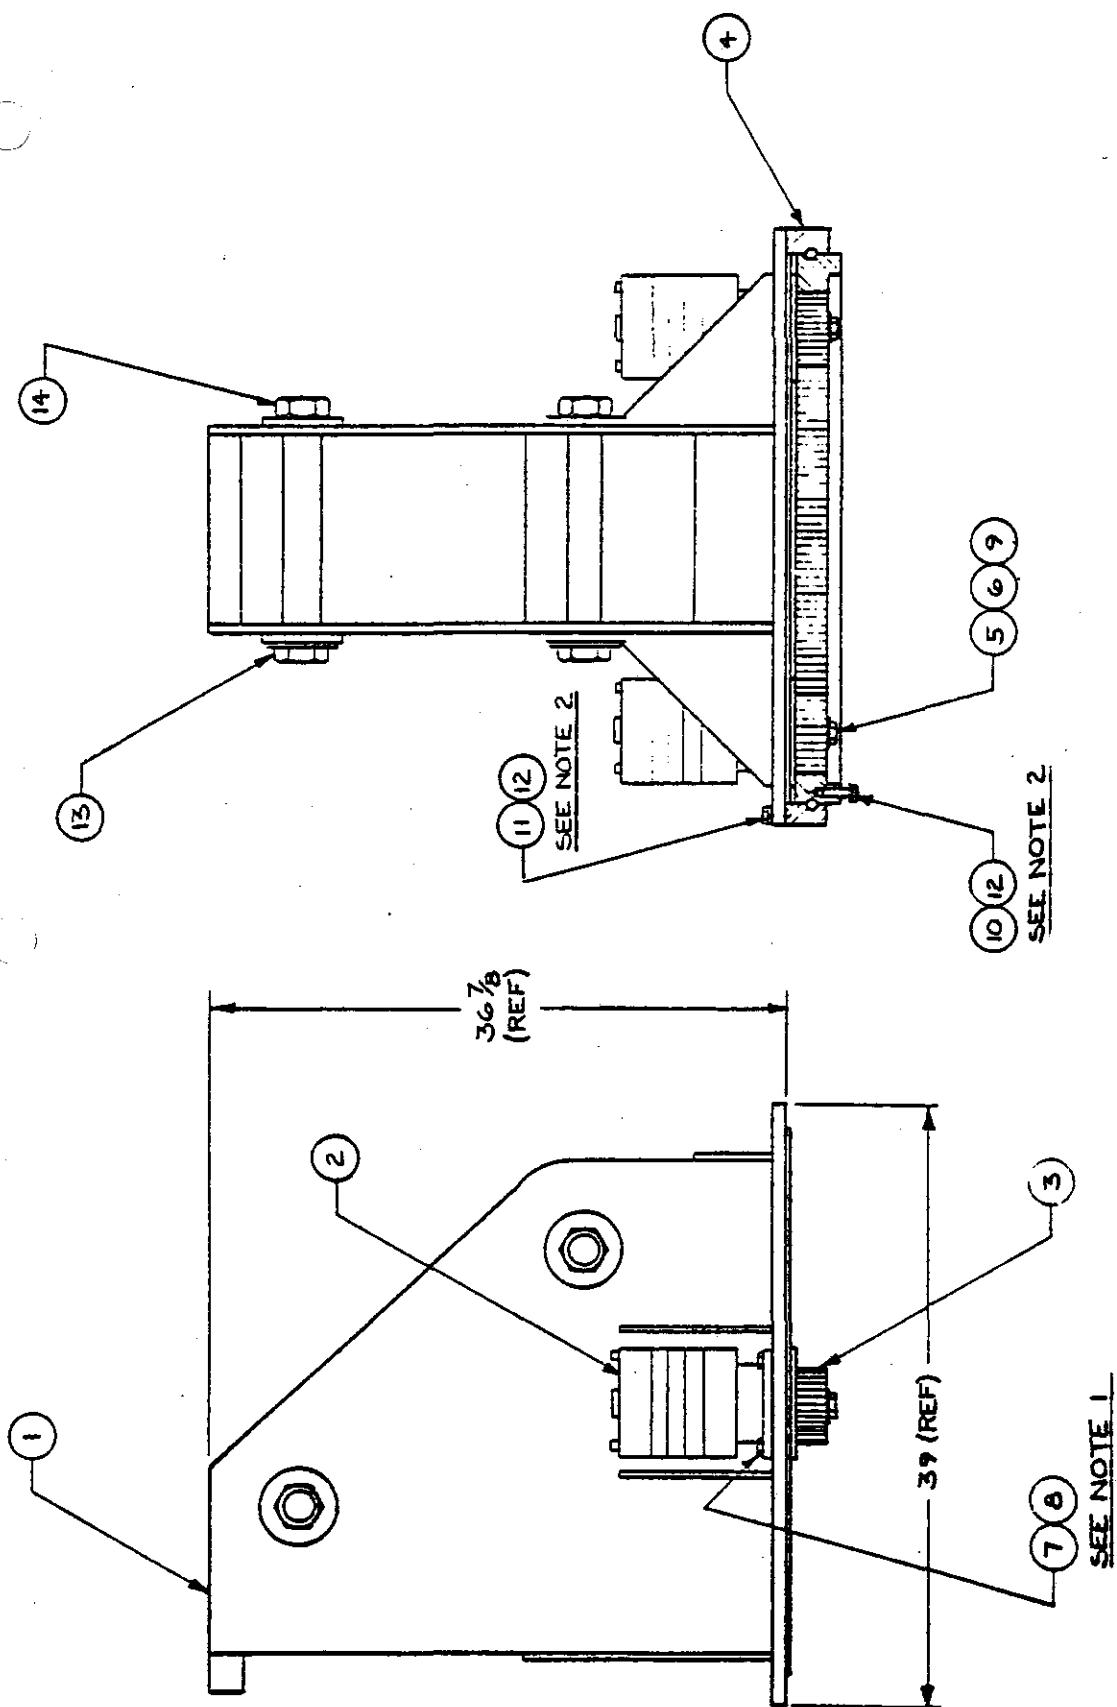

This warranty does not extend to any of the following:

1. Defects, damage or deterioration due to normal use, wear and tear, exposure, storage or corrosion. Normal use ordinarily effects hoses, seals and packings, work surfaces and the like.
2. Normal maintenance service or the replacement or repair of parts required to be replaced or repaired in the course of normal maintenance service. Normal maintenance ordinarily includes replacement of filters, seals and the like.
3. Defects, damage or deterioration due to failure to properly maintain equipment or parts, including but not limited to inspections or maintenance not in accordance with manuals, schedules or good practice.
4. Damage or defects caused by abuse of the equipment or parts by overloading, misapplication, improper operation or use, installation of unapproved accessories or unauthorized alterations.
5. Damage or defects resulting from repairs of equipment or parts in an unauthorized manner or the installation of components other than Barko Hydraulics or authorized parts.

The liability of Barko Hydraulics, except as to Paragraphs A and B above, arising out of supplying hydraulic loaders or replacement parts therefor, or their use, whether premised on warranties, contract, negligence or otherwise, shall not in any case exceed the cost of correcting the defects in the hydraulic loaders or replacement parts therefor as herein provided, and upon expiration of the applicable warranty period herein all such liability shall terminate.

Barko Hydraulics shall in no event be liable for any incidental, consequential, or special damages or for any expenses or delays caused by defective material or workmanship, and no allowance will be made for repairs, replacements or alterations without Barko Hydraulics prior written approval. The foregoing shall constitute the sole and exclusive remedy of Dealer and Buyer on the sale and exclusive liability of Barko Hydraulics.

The warranties stated herein are in lieu of all other warranties whether written or oral, statutory, express or implied, including any warranty of merchantability or fitness for purpose.

INSTRUCTIONS FOR REPLACING SPOOL SEALS

40 P VALVE

NOTE: FOR THE PURPOSE OF THESE INSTRUCTIONS WE SHALL CONSIDER THE CONTROL HANDLE SIDE OF THE VALVE AS THE FRONT, AND THE OPPOSITE SIDE THE BACK.

1. AT THE BACK OF THE VALVE, REMOVE ALL BONNET ASSEMBLY PARTS WHICH ARE CONNECTED TO THE SPOOL AND KEEP IN THE ORDER OF DISASSEMBLY. (SEE DRAWINGS ON THE REVERSE SIDE FOR THE PARTS INVOLVED IN THE MAKEUP OF DIFFERENT BONNET ASSEMBLIES.)
2. AT THE FRONT OF THE VALVE, REMOVE ALL PARTS CONNECTED TO THE SPOOL. (HANDLE AND ETC.)
3. THE SPOOL SEALS ON THE 40P CONTROL VALVE CAN BE INSTALLED EXTERNALLY WITHOUT REMOVING THE SPOOL FROM THE VALVE SECTION.
4. REMOVE THE PART #51109 SEAL PLATE, THE # 51008 SPOOL SEALS, AND THE #51110 O-RING SEAL.
5. THOROUGHLY CLEAN THE COUNTERBORE AND THE SEAL GROOVES IN THE SEAL PLATE.
6. LIGHTLY OIL THE NEW SEALS TO BE INSTALLED, AND INSERT THEM IN THE GROOVES IN THE SEAL PLATE.
7. SLIDE THE SEAL PLATE OVER THE END OF THE SPOOL INTO THE CASING COUNTERBORE.
8. RE-INSTALL ALL PARTS THAT WERE REMOVED IN REVERSE ORDER.

NOTE: IF THIS VALVE DID NOT HAVE A HANDLE INSTALLED, THE SPOOL CAN BE PREVENTED FROM TURNING WHILE REMOVING THE SPRING CENTERING PARTS BY USE OF A SCREWDRIVER INSERTED THROUGH THE CLEVIS SLOT.

FILTER ELEMENT REPLACEMENT

To remove the filter element, the following steps must be taken

1. Unscrew and drop #59001 Center Post (1" clearance for drop is all that is necessary to remove element container.)
2. Remove #59003 Filter Housing, #59005 Back-Up Washer, #59006 Gasket, #59007 Element, etc.
3. Clean all parts and filter housing. (CAUTION: Do NOT use solutions such as perchlorethylene or trichlorethylene to clean the Cork Gasket as these solutions will tend to cause swelling of the Gaskets which could result in malfunction of the filter when reassembled.)
4. Reassemble in the following order:
 - A. Put #59001 Post in Filter Housing. (Be sure Post has Gasket Seal, #59016, and that Gasket, Bottom of Filter Housing, and flange of Center Post are absolutely free of all oil and grease when tightening in order to prevent extrusion of Gasket.)
 - B. Insert #59004 Conical Spring, with small coil end down.
 - C. Insert #59005 - $4\frac{1}{4}$ " Back-Up Washer (Bottom).
 - D. Insert #59006 Bottom Gasket.
 - E. Insert Filter Element.
 - F. Insert #59006 Top Gasket.
 - G. Insert Top #59005 Back-up Washer.
 - H. Position #59016 Filter Housing and tighten #59001 Center Post to MAXIMUM OF 20 FT. LBS. TORQUE.

CAUTION: When tightening Center Post, Hold Can From Turning, otherwise #65343 O-Ring may stretch out of shape and a leak may occur.

NOTE: Be sure Indicator reads "O" when system is not in operation

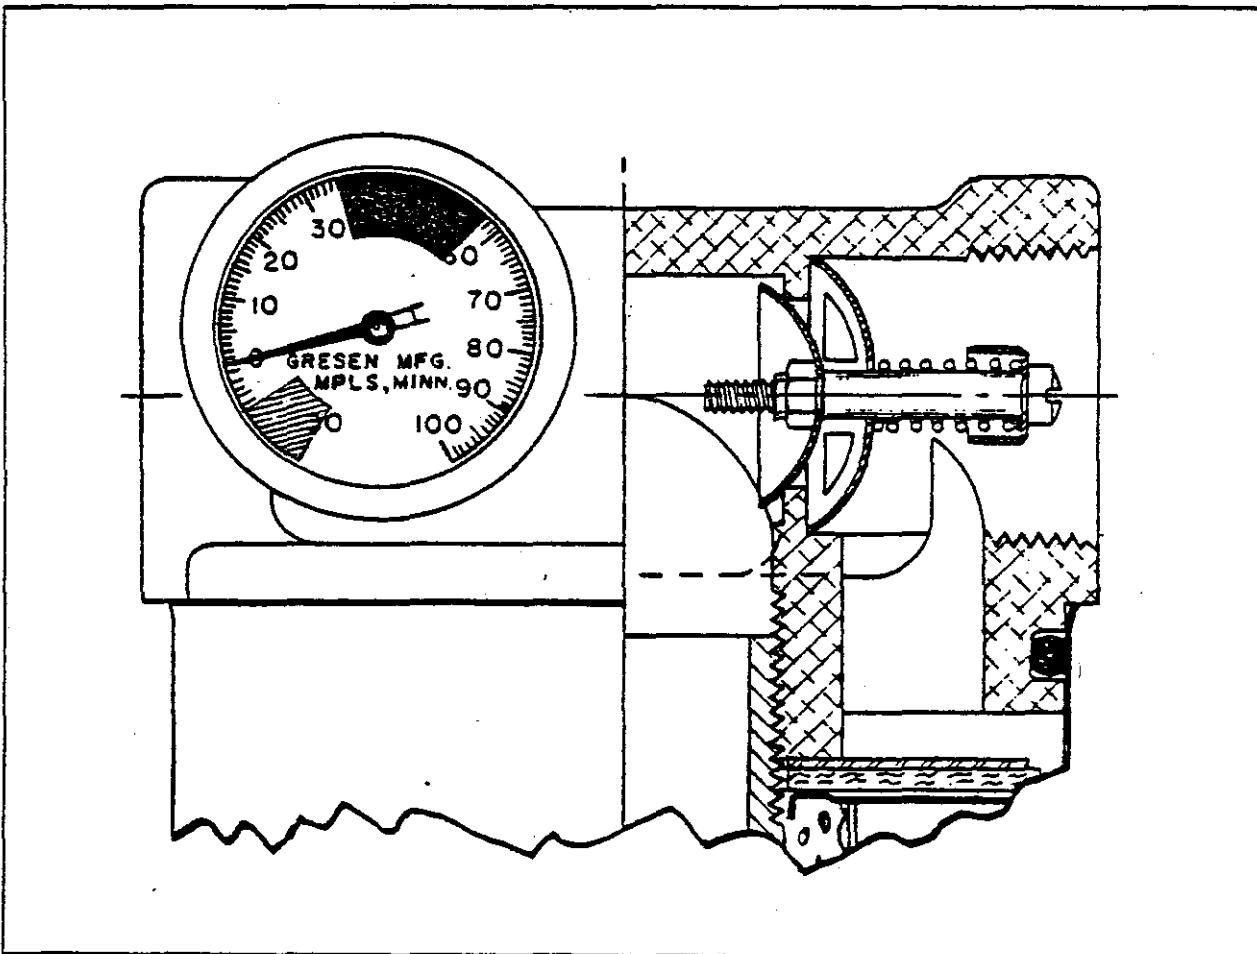

FILTER

INSTRUCTIONS
TO REPLACE BY-PASS SPRING

TOOLS REQUIRED: One (1) Screwdriver
One (1) Socket Wrench - #11-11/32" Hex.

1. Disassemble Filter (See Filter Element Replacement Instructions)
2. For convenience, put #59022 Head Casting in Vise. (Upside-Down)
3. With screwdriver and socket wrench, remove By-Pass valve assembly. Observe carefully position of these parts.

Reinstall new spring.

INTRODUCTION

This Parts Manual has been designed to assist you in identifying and ordering replacement parts for your Barko loader.

The manual is divided into seven sections: Nomenclature, Structural Upper, Structural Lower, Mechanical, Electrical, Hydraulic and Options and Accessories. All pages use two numbers for identification. The first number is the section and the second number is the page number. In other words, page one in section one is designated 1-1, and page two in section one is designated 1-2.

Your Barko loader has been designed to provide you with long, efficient service — and, in its manufacture, only the highest quality parts and components have been used. We, therefore, strongly recommend the use of only authorized Barko replacement parts to insure continued long life and service from your loader.
