# SECTION I INTRODUCTION

This manual contains pertinent step-by-step maintenance instructions plus parts ordering information and a complete part and service kit listing for the Model CP Directional Control Valve.

If further assistance is required, contact:

Your Gresen Distributor or Representative.

## SECTION II DESCRIPTION

The Model CP Directional Control Valve may be purchased with six different valve sections plus various options to meet the desired job specification.

The following paragraphs describe the six sections and any options with reference to the parts illustrations in Section IV in this manual.

### NOTE:

After February 1, 1973, the main valve sections were revised to incorporate an easily changeable spool seal design, and a new section seal machining design. The new sections can be identified by the "rib" on the top of the casting on the "A" port end. See Chart.

	OLD PART NUMBERS (BEFORE FEB. 1, 1973)	NEW PART NUMBERS (AFTER FEB. 1, 1973)
Center Section	1814-000	6721-000
Center Section	1914-000	6732-000
Mid Inlet Section	1886-000	6825-000
Outlet Cover	1816-000	6770-000
Exhaust Seal	1621-001	6815-001
Pressure Seal	1859-001	6814-001

Numbers shown for sections and covers are base casting numbers, not ordering numbers. Refer to Parts Ordering Information, Section III, for ordering information.

### 4-WAY, 3-POSITION VALVE SECTION (Refer to Figure 4-2)

This section provides control of double-acting cylinders without the floating action plus hydraulic motor start, stop and reverse control where free-wheeling is NOT required. Cylinder ports are blocked in neutral position.

### 3-WAY, 3-POSITION VALVE SECTION (Refer to Figure 4-3)

This section provides control of single acting cylinders or start and stop of non-reversible hydraulic motors where

free-wheeling of motor is not required. The cylinder port is blocked in neutral position.

### 4-WAY, 3-POSITION VALVE SECTION WITH PRESSURE DETENT RELEASE (Refer to Figure 4-4)

This section provides automatic return to neutral position as soon as work cycle is completed.

The spool is held in either power position by a detent assembly until released. When pressure in the power circuit reaches a predetermined setting, the detent assembly releases and the centering spring returns the spool to neutral.

### 4-WAY, 3-POSITION VALVE SECTION WITH PILOT-OPERATED CHECK ASSEMBLY (Refer to Figure 4-5)

This section combines the functions of a 4-way section and a pilot operated check, or lockout, valve in one valve housing.

Pilot operated checks are used where any fluid leakage through the control valve (cylinder port to tank port) would adversely effect the performance of the system.

Examples are: Clamping devices where any leakage would reduce the clamping pressure; outriggers which must be positioned firmly; elevated work platforms where leakage would cause the platform to settle.

### 4-WAY, 4-POSITION, FLOAT VALVE SECTION (Refer to Figure 4-6)

This section provides control of double-acting cylinders requiring a floating action such as: loaders, dozers, snow plows, etc.

Incorporated into the valve section is a 4-position float positioner. Three positions are standard double-acting with spring return to neutral. The fourth position is detented to hold control in float (both cylinder ports open to tank).

**TANDEM (PRIORITY) SECTION, 3-WAY, 4-WAY, OR 4-WAY FLOAT (Refer to Figure 4-2)**

This section allows any upstream valve sections to have priority. Only when the upstream sections are in neutral or metering position will oil be available to this section.

**SPOOL ACTION OPTIONS:**

**A. SPRING RETURN TO NEUTRAL, (Standard). (Refer to Figure 4-8)**

Spool will return to neutral position from A or B power position when handle is released.

**B. "R" OPTION, Detent with Spring Return to Neutral (Refer to Figure 4-9)**

Can be used on either 3-way, 4-way or free flow spool. Has detent position for either spool "in", spool "out" or 2-position detent for both spool "in" and spool "out" positions, with spring return to neutral position.

Recommended for hydraulic motors where the motor operates continuously in one direction (detent position) with only intermittent operation in the opposite direction.

**C. "D" OPTION, 3-Position Detent (Refer to Figure 4-10)**

Used when manual placement (NO spring return to neutral) is desired in any of three positions—spool in, spool out, and neutral. An optional detent stop (part no. 1889-001) may be used to convert spool action to "neutral" and "spool out" positions only or for "neutral" and "spool in" position only, thus giving a two-position spool action.

**D. "A" OPTION, Spring Extended Spool (Refer to Figure 4-11)**

This feature eliminates spring return to neutral. The spring returns to the spool "out" position only, usually used for cam operation of spool.

Customer must supply cam follower mechanism.

**HANDLE ASSEMBLIES (Refer to Figures 4-13 through 4-16)**

Provides choice of either horizontal or vertical handle assemblies.

**INLET and OUTLET COVERS (Refer to Section III, Parts Ordering Information)**

**CYLINDER PORT CHECK and RELIEF VALVE OPTION (Refer to Figures 4-17 through 4-22)**

# SECTION III MAINTENANCE

## REPLACING, ADDING OR REMOVING SECTION ASSEMBLIES

### NOTE

For clarification, we shall call the inlet cover containing the main relief the left side of the valve assembly. Refer to Figure 3-1.

1. Before disassembly, it is suggested that each valve section be marked numerically to avoid incorrect reassembly.
2. Remove three assembly stud nuts (Item 19, Figure 4-1) from the right end section using a 9/16" thin wall socket.

3. Remove valve sections by sliding from assembly studs (Item 1, Figure 4-1).

4. If valve sections are to be added or removed, use the proper length assembly studs from the chart below.

No. of Sections	Stud Part No.
1	1841-001
2	1842-001
3	1843-001
4	1844-001
5	1845-001
6	1846-001
7	1847-001
8	1848-001
9	1849-001

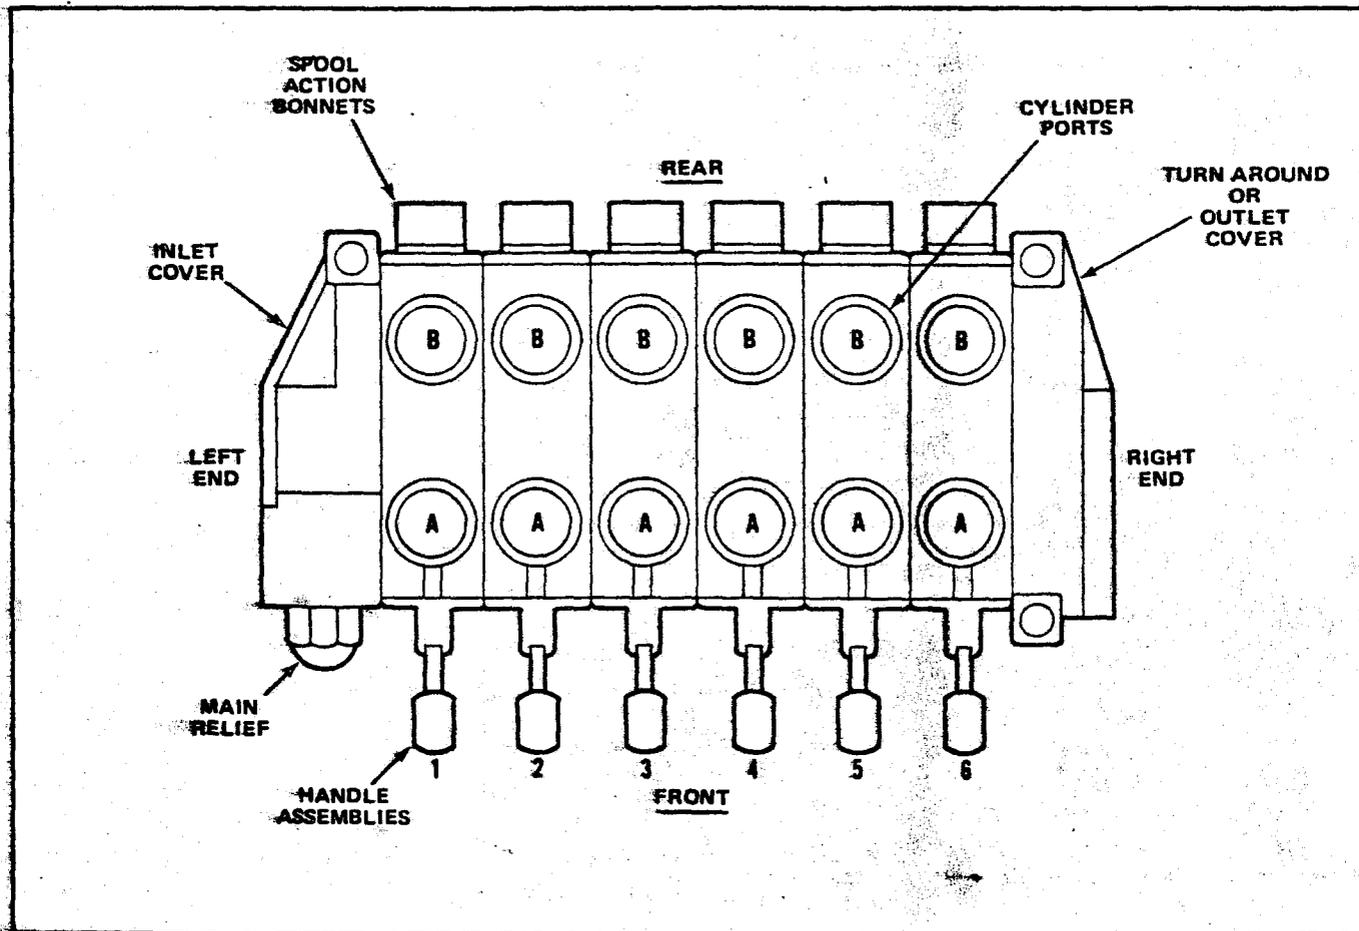

Figure 3-1. Schematic-View of Typical Model CP Control Valve Assembly.

## NOTE

Use assembly nuts (part no. 1856-001), six required, with all assembly studs. **NO LOCK WASHERS!** All studs are stress-proof material and should be replaced only with original equipment replacement parts.

5. Thoroughly clean O-ring counterbores and ground surfaces of each section.
6. Replace the four O-rings. For valves manufactured prior to February 1, 1973—use two 1621-001 and two 1859-001 seals per section. For valves manufactured after February 1, 1973—use two 6815-001 and two 6814-001 seals per section.
7. Replace valve sections on assembly studs in the same order in which they were removed. O-ring counterbores should be to the left when facing "A" port-end of valve.

## NOTE

Use care in replacing valve sections to avoid dislodging O-rings from counterbores.

8. When all valve sections are positioned on assembly studs, replace stud nuts and tighten evenly to 20 ft. lbs. torque.

## CAUTION

If stud nuts are not tightened to the proper torque, valve spools may bind or stick, or cause section seals to extrude.

## REPLACING SPOOL SEALS

For valves manufactured after February 1, 1973. Valves are identified by casting no. 6721, 6732 or 7121 and by a rib adjacent to the "A" port.

Figure 3-2 shows spool assembly—less the complete handle assembly. When handle bracket is furnished, retainer plates and screws (items 1 and 4, Figure 3-2) are omitted. Seal assembly is retained by the handle bracket which will also retain the optional wiper seal.

1. Remove bonnet assembly parts from back of valves and keep in order of disassembly.

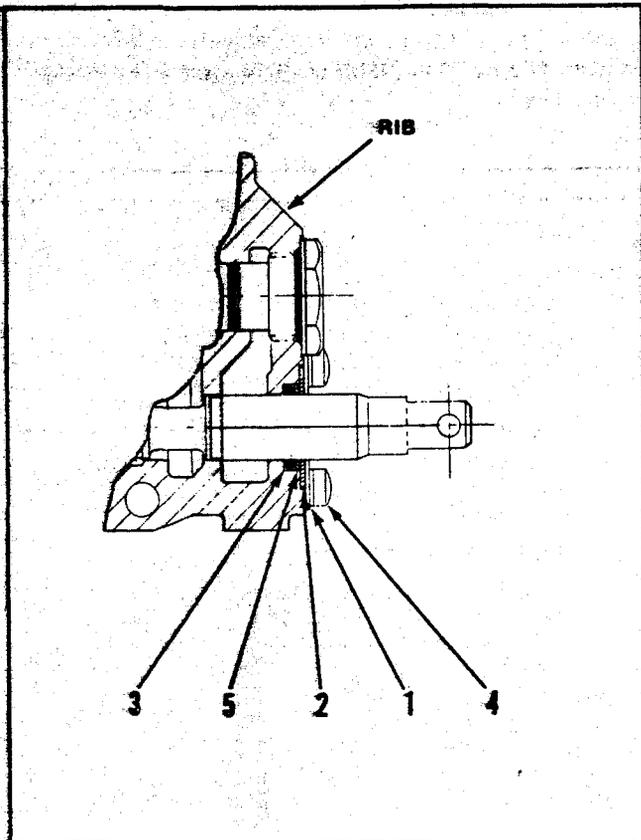

Figure 3-2. Spool Seal Assembly After February 1, 1973.

2. Remove all parts connected to the spool on the front of the valve, either the complete handle bracket assembly, or the seal retainer assembly if a handle bracket is not furnished.

## NOTE

**DO NOT REMOVE** the spool as the seals can be replaced externally. Prevent spool from turning or moving by inserting a screw driver through clevis slot, or running a rod through the pin hole and using as a handle. **DO NOT** hold the spool with a wrench. This will destroy the finish.

3. Remove retainer plate (Item 1, Figure 3-2), retainer plate washer (Item 2), back-up washer (Item 5), and spool seal (Item 3).
4. Thoroughly clean counterbore.
5. Lightly oil new seals. Slide over valve spool and insert in seal counterbore.

For valves manufactured prior to February 1, 1973. Valves are identified by 1814, 1900 or 1914 and the absence of a rib adjacent to "A" port.

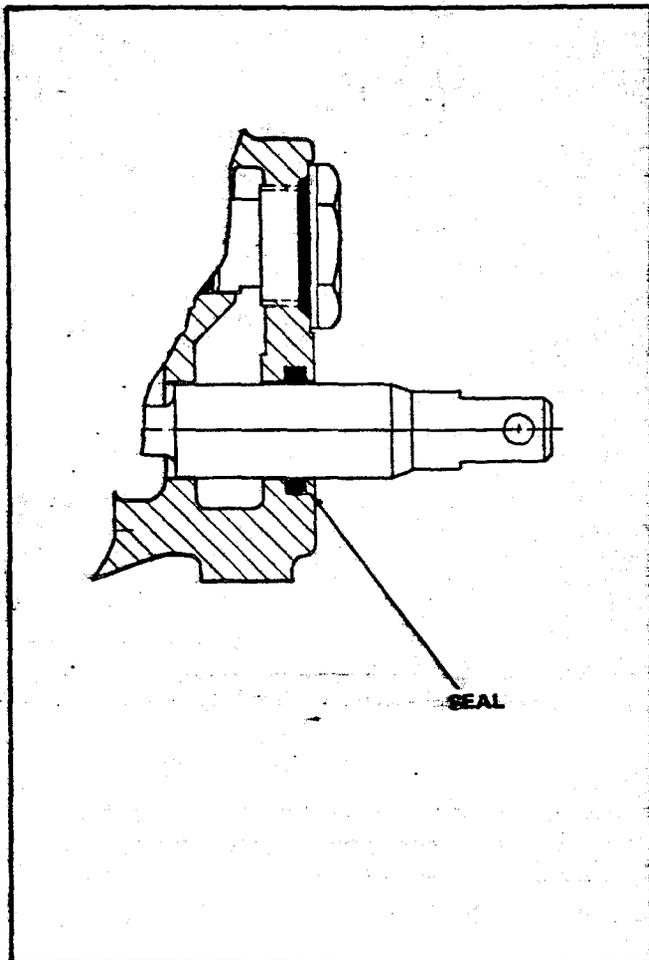

Figure 3-3. Spool Seal Assembly Prior to February 1, 1973.

1. Remove all bonnet assembly parts from back of valve and keep in order of disassembly.
2. Remove all parts connected to the spool on the front of valve, handle, etc.
3. Push spool into housing from the front of the valve until the front seal is exposed, then remove the front seal. Pull spool out of housing from front end, being very careful that neither spool nor bore is scratched or damaged in any way.

#### NOTE

Each spool must be reinstalled in the same valve section from which it was removed.

4. Remove back seal.
5. Thoroughly clean both seal grooves.
6. Replace the spool through the front of the housing, being sure that the end having the internal thread enters the housing first. Push spool into the valve exposing the front seal groove. Insert a new 1129-001 seal in the front groove. Pinch one side of the seal causing the seal to bend into a shape slightly smaller than the seal groove in the valve. When the seal has been properly placed in the seal groove, straighten the seal by running a smooth rod around the exposed surface of the seal until a perfect fit is obtained. To check, run your finger around the exposed edge of the seal. You should have a smooth perfect ridge with no kinks or twists.
7. Apply a small amount of oil on the 1129-001 seal to prevent it from tearing during assembly.
8. Pull the spool out toward the front of the valve until the spool handle end is exposed. Pull the spool slowly past the seal with a twisting motion to assist the movement. Continue to pull the spool until the back spool seal groove is exposed.

#### NOTE

DO NOT pull the spool too far as this will allow the seal in the front groove to enter a spool groove and cut the seal when the spool is pushed back.

9. Install the new back seal in the same manner as the front seal taking care that the seal is not twisted or cut.
10. Push the spool into the housing past the seal with a twisting motion until 5/16" of the polished surface of the spool remains exposed on the front of the valve.
11. Reassemble all parts disassembled in step two.
12. Reassemble, in reverse order, all parts disassembled in step one. Use 12 ft. lbs. torque to tighten 1812-001 assembly screw or 1840-001 detent holder.

## PARTS ORDERING INFORMATION

Service kits are available for servicing the CP Sectional Valve. Use kit numbers and part numbers shown in the following chart.

Section Part No.	Seal Kits Contains all seals necessary for one section for standard, 3-way and 4-way valves, including 1-set of section seals.	Seal Kits Contains all seals necessary for one float section, including 1-set of section seals.	Section Seal Part No.	Outlet Cover Part No.
	<b>FOR VALVES MANUFACTURED PRIOR TO FEBRUARY 1, 1973</b>			
1814, 1900 or 1914	K-6001	K-6002	1621-001 (2 req'd.) 1859-001 (2 req'd.) Identified by non-permanent white mark	1816
	<b>FOR VALVES MANUFACTURED AFTER FEBRUARY 1, 1973</b>			
6721, 6732, or 7121 Identified by rib adjacent to "A" port	K-6027	K-6028	6815-001 (2 req'd.) 6814-001 (2 req'd.) Orange mark removed May, 1974	6770

**Notes:**

1. Old and new sections and covers are interchangeable within a valve assembly. However, section seals are not interchangeable with the old and new models.
2. Only the new sections will be available after February 1, 1973.

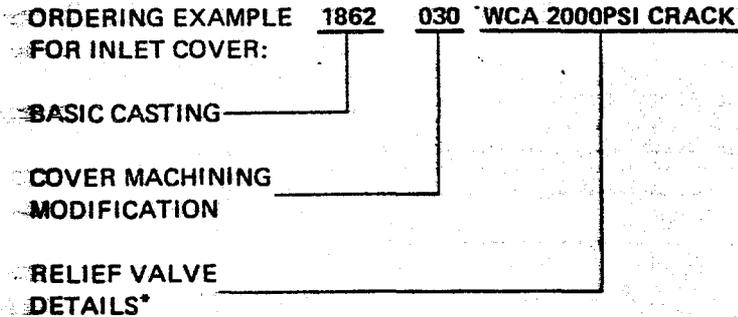

Inlet cover, part number 1862, has top inlet and top outlet ports. If top outlet port is not machined, the outlet port in the right end section must be used for tank return line. The inlet cover may be machined with several combinations of port sizes and locations. Specify port size by using machining modification number.

**NOTE:** NPT and SAE ports cannot be intermixed in one casting. Below are listed the available inlet and outlet port sizes.

**Machining Modification Chart Inlet Cover, Part No. 1862.**

All covers listed include a 1/4"-18 NPT gage port.

Location	NPT			SAE		
	1/2	1/2	3/4	10	10	12
Top In	1/2	1/2	3/4	10	10	12
Top Out	1/2	3/4	3/4	10	12	12
Machining Modification Number	029	007	008	028	030	020

\*Specify model number of relief valve to be installed; either WC or WCA.

Specify relief setting required.

OR

Specify "NR" (no relief) plug installed.

OR

Specify PSP, plastic shipping plug, installed in relief cavity.

Example: If a left inlet cover with a SAE 10 inlet and a SAE 12 outlet with WCA relief set at 2000 PSI crack is required, order 1862-030-WCA 2000 PSI crack.

**OUTLET COVER**

If Power Beyond option is specified, optional outlet to tank must be provided in either the Outlet or Inlet Cover.

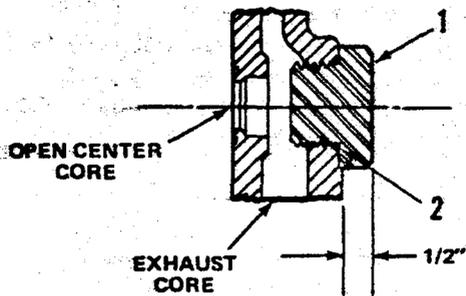

**Machining Modification Chart For Outlet Cover, Part No. 6770.**

Port Size Available	End Outlet Port Only	Machined for Power Beyond Sleeve, Closed Center Plug and Conversion Plug.	
		With End Outlet	No End Outlet
1/2-14 NPT	6770-004	6770-009	
3/4-14 NPT	6770-001	6770-005	6770-007
SAE 10 (7/8-14 UNF)	6770-002	6770-006	
SAE 12 (1-1/16 12 UNF)	6770-003	6770-013	

**Outlet Cover Options**

**No. 1727 Conversion Plug**

Provides for conversion from "Power Beyond" or "Closed-Center" usage to "Open-Center" or vice-versa.

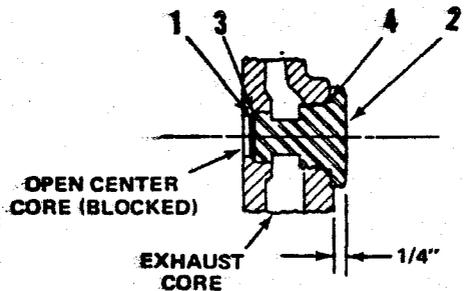

**SERVICE KIT K-6016**

(Contains 1 Each of Items 1 and 2)

Item No.	Part No.	Description	No. Required
1	1727-001	Conversion Plug	1
2	2709-001	O-Ring Seal	1

**No. 1830 Closed-Center Plug Option.**

Provides a "Closed-Center" System by plugging the open-center flow passage. It is normally used with a variable displacement pump.

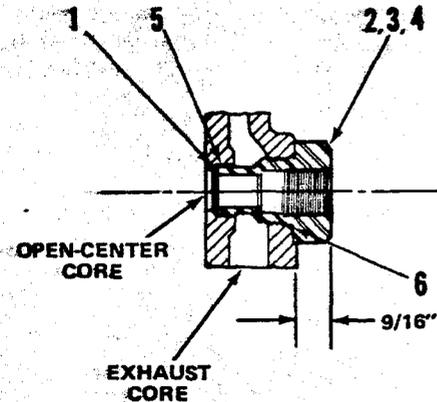

**SERVICE KIT K-6015**

(Contains 1 Each of Items 1, 2, 3 and 4)

Item No.	Part No.	Description	No. Required
1	1721-001	Seal	1
2	1830-001	Closed-Center Plug	1
3	1858-001	Back-Up Washer	1
4	2709-001	O-Ring Seal	1

**No. 1833, 1835 or 1836 Power Beyond Sleeve Options.**

Provides for proper hook-up of an additional valve "down-stream". The Power Beyond Sleeve prevents subjecting the exhaust core of the valve to back pressure.

**SERVICE KITS**

K-6017 (1/2 NPT - Contains 1 Each of Items 1, 2, 5, 6)

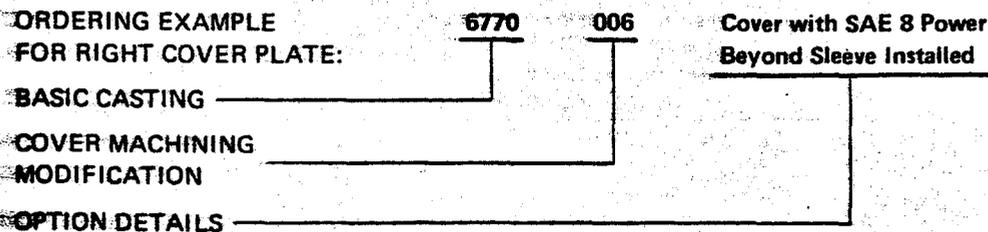

K-6018 (SAE 8 - Contains 1 Each of Items 1, 3, 5, 6)

K-6019 (SAE 10 - Contains 1 Each of Items 1, 4, 5, 6)

Item No.	Part No.	Description	No. Required
1	1721-001	Seal	1
2	1833-001	P.B. Sleeve (1/2-14 NPT)	1
3	1835-001	P.B. Sleeve SAE 8 (3/4-16 UNF)	1
4	1836-001	P.B. Sleeve SAE 10 (7/8-14 UNF)	1
5	1858-001	Back-Up Washer	1
6	2709-001	O-Ring Seal	1

**NOTE**

To convert from Power Beyond usage to "Open-Center" usage, NEVER ATTEMPT TO PLUG THE POWER BEYOND SLEEVE, as this would convert to "Closed-Center" Valve.

Example: If a right cover with a SAE 10 outlet and a SAE 8 power beyond sleeve was required, then order per the above description.

**CP Valve Center Section**

The following information is necessary for proper specification for each CP Valve Center Section:

- 1. Function of Section
- 2. Options
- 3. Cylinder port sizes

- 4. Cylinder port "A" Options
- 5. Cylinder port "B" Options
- 6. Handle end Options

The chart shown below will help in identifying the Options available and the information needed for proper ordering.

Form 2060
